

# Coin Lock Silver

*SANIBOX Silver is designed to meet the needs of a cafe, a restaurant, or a store. Silver is a robust but simple coin lock solution. It functions without any display or revenue counter and is recommended when there is good control of revenues from toilet visits.*

## What is a SANIBOX Silver?

Silver is a digital coin lock without a display or revenue logging.

## Installation

The coin lock is placed on the wall next to the toilet door. Electric power is supplied via a transformer that can be installed close by, e.g. in the ceiling. An internal watchdog restarts the coin lock if there is a power failure. The coin lock is capable of handling 12-24 V and is CE controlled and approved.

## Box Type

Two different box types can be selected. A short cover is recommended if the coin lock is emptied regularly. A long box holds more coins.

Short box: W 14 cm, H 23,5 cm, D 8 cm.

Long box: W 14 cm, H 29,8 cm, D 8 cm.

## Extras

An "occupied" lamp and tokens can be used with the coin lock. A "free-entry" button can be installed in an appropriate place for free visits.
