

# Credit Card Payment System

*The SANIBOX credit card payment solution is easily combined with a coin lock to open a door. A flexible credit card payment solution enables the toilet visitor to choose between a credit card or coin payment. Whatever the solution, both always generate revenues. Credit card payment is simple, fast, reliable and easy to use, without any complicated processes when a payment is done.*

## Credit Card or Coins?

The credit card system works as a standalone unit or in combination with a coin lock. Simply select the payment solution that best suits your needs.

## User Friendly

The credit card payment system is simple and easy to use. When a credit card is fed into the credit card box, a voice will clearly verify the transaction and the door will open. There is no response code needed to get through the door.

## Easy to get Started

Everything is ready for installation upon delivery, including: bank contracts, subscriptions and certified hardware and software. Every transaction goes online to the server, where the payment is verified, guaranteeing a completed payment.

## Certified Payment System

Our credit card payment system is certified, it is therefore safe for the customer to pay by Visa, MasterCard, Maestro, beta tag, RFID tag, staff card or any other pre calibrated magnetic card.

## Simple to Install

The installation of the credit card payment system is simple. The reader is mounted directly on the

wall. The modem is installed hidden from view, e.g. in the ceiling. The modem operates on a GPRS network and requires only an electric power connection to work. 24 V is needed for the system.

## Agreement

An agreement is signed between SANIBOX and the customer. The service includes administration of the revenues and a monthly deposit of the proceeds to the specified account.

## References

SANIBOX credit card payment systems have been successfully installed to open bathroom doors all over Sweden: in malls; libraries; and other public places.

Characteristics	Maintenance	User Experience
